## Array rotation left. Rotate Reversal Algorithm:-

$$N = 4.$$

$$R = 100000_2$$

	10	20	30	40	50
1 <sup>st</sup>	20	30	40	50	10
2 <sup>nd</sup>	30	40	50	10	20
3 <sup>rd</sup>	40	50	10	20	30
4 <sup>th</sup>	50	10	20	30	40

$$R = R \cdot J \cdot N = 100000_2^{1/4} = 2$$

After rotation of N times,  
the array is same  
as the original one

$$N = 100000$$

$$R = 99999$$

$$R \% N =$$

$$N = 10 \quad R = 7$$

10    do    30    20    50    60    70    80    90    100

Steps  
1) 100    90    80    70    60    50    40    30    20    10     $\rightarrow$  Reverse array

2) 80    90    100    10    do    30    40    50    60    70     $\rightarrow$  <sup>rotate</sup>  $N - R = 3$ , first rotate  
then rotate remaining

Rotate right:

$$N = 10 \quad R = 7$$

10    do    30    40    50    60    70    80    90    100

Steps  
1) 100    90    80    70    60    50    40    30    20    10     $\rightarrow$  Reverse array

2) 40    50    60    70    80    90    100    10    20    30     $\rightarrow$  <sup>rotate R</sup>  $R = 3$ , first  
rotate then  
rotate remaining

Left shift -  $N - R$  elements

Right shift    R elements

$$N = 5$$

$$\text{Swaps} = \emptyset$$

$$\mathcal{D}_p = 1 \ 2 \ 3 \ 4 \ 5$$

$$\mathcal{D}_p = 1 \ 4 \ 2 \ 3 \ 5$$

$$\text{Cycle} = 1 \neq 3$$

$$\begin{matrix} \text{2nd} \\ \text{swap} \end{matrix} = \begin{matrix} 4 & - & 3 \\ & \searrow & \\ & 1 & \\ & & 2 \end{matrix}$$

$$\begin{aligned} \text{Swaps} &= \text{cycle} - 1 \\ &= 3 - 1 \\ &= 2 \end{aligned}$$

$$1^{\text{st}} \text{ swap} \quad 1 \ 2 \ 4 \ 3 \ 5$$

$$2^{\text{nd}} \text{ swap} \quad 1 \ 2 \ 3 \ 4 \ 5 \swarrow$$

Eg 2:

$$\begin{matrix} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 & 11 \\ 8 & 1 & 4 & 3 & 6 & 5 & 8 & 7 & 10 & 11 & 9 \end{matrix}$$

$$\underbrace{8-1}_{=1} = 2-1$$

$$\underbrace{4-3}_{=1} = 2-1$$

$$\underbrace{8-7}_{=1} = 2-1$$

$$\underbrace{6-5}_{=1} = 2-1$$

$$\begin{matrix} 10 & - & 11 \\ & \searrow & \\ & 9 & \end{matrix} = 3-1$$

$$\text{Swaps} = \emptyset \times 2 \neq 4$$

b

## Greedy Approach

sh188.

Minimum Operation - Zero to N:

$$N=5 \quad \text{count} = \phi x_2 x_4$$

+1    01    \*2.

$$\emptyset + 1 = x + 1 = 2 * 8 = 4 + 1 \\ = 5,$$

$$N=8 \quad \text{count} = \phi x_2 x_4$$

$$+1 \quad 01 \quad *2$$

$$\emptyset + 1 = 1 * 8 = 2 * 4 = 4 * 2 = 8,$$

$$N=7$$

$$+1 \quad 01 \quad *2$$

$$0 \quad 1 \quad 2 \quad 4 \quad 5 \quad 6 \quad 7$$

$\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$

$$\text{Count} = \emptyset x x x x x b$$

5 is minimum, to avoid confusion, we use greedy approach. (cheating from reverse)

$$0 \quad 1 \quad 2 \quad 3 \quad 6 \quad 7$$

$\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$

$$\text{Count} = \emptyset x 4 \quad 3 \quad 4 \quad 5$$

Greedy approach

$$N=7$$

$$+1 \quad *2$$

$$-1 \quad /2 \rightarrow \text{reverse operation}$$

$$7 \quad 6 \quad 3 \quad 2$$

$\downarrow$      $\downarrow$      $\downarrow$      $\downarrow$

$$\text{Count} = \emptyset x x x + 2 = 5$$

$$0 \rightarrow 2 = \min^2 \text{ operation required (so adding 2)}$$

$$\text{If } N \text{ is odd subtract } 1 \\ \text{if } N \text{ is even divide by } 2$$

Minimum Operations X to Y

$$\text{Eg: 1} \quad x \quad y \\ 5 \rightarrow 8$$

$$*2 \quad -1.$$

Reverse  $\rightarrow$  greedy.

$$8 \rightarrow 5 \\ /2 \quad +1 \rightarrow \text{inverted operation}$$

$$8/2 = 4$$

$$4 + 1 = 5$$

Eq: 2:

$$4 \rightarrow 31$$

$\downarrow$      $\downarrow$

$$31 \rightarrow 4 \quad \text{count} = \emptyset y x_2 x_4$$

$/2 \quad +1$

$$32/2 = 16/2 = 8/2 = 4 \checkmark$$

If N is odd, add 1

If N is even, divide by 2

$$\text{Eg: 2} \quad 10 \rightarrow 1$$

$$\times 2 \quad -1.$$

$$1 \rightarrow 10$$

$$10 \quad +1$$

As 1 is odd, and we cannot divide 1 by 2 so add 1 nine times

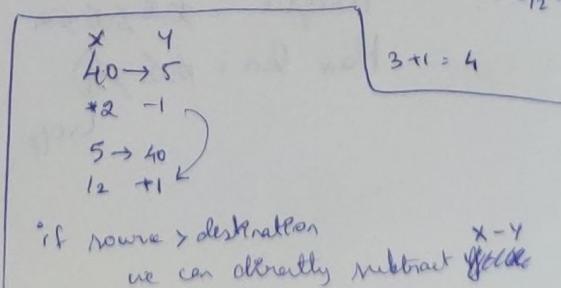

$$\text{Count} = 9,$$

$$\text{Eg: 3} \quad 6 \rightarrow 35$$

$$35 \rightarrow 4$$

$$\text{Count} = \emptyset x x x x x b$$

$$36/2 = 18/2 = 9 + 1 - 10 = 10/2 = 5 + 1 \\ = 6/2 = 3$$

if source > destination

we can directly subtract  $y - x$

$\Gamma \rightarrow R$

Max Sum - KxK Sub Matrix

①	10	20	80	40	55
	90	150	② 90	200	65
